This scheme is for surface water and flooding attenuation works on the seafront. Detailed flood modelling has identified that the severe flooding experienced in recent years in the Central Seafront area has several components: overland surface flow from Queensway; surcharging trunk sewers passing below the car-park; and surface run-off from the extensive impervious surface of the car-park itself. A major contribution to attenuation of the flooding would be provided by works in the car-park: underground tanks within the site and bunding (raising a small embankment) at the north boundary of the site in conjunction with efficient gully provision to collect surface water.

This scheme is also for a pumping station with associated tank storage to maintain capacity in the trunk sewers around Hartington Road. By pumping them out against high tides this would also have significant impact on the flood risk of the area.
