- Tidal and wave energy generation on the pier. Separate studies would be needed as tidal energy is more advanced than wave energy at present and are separate industries, although connected by both using the power of the sea. The deployment of both tidal and wave will be subject to a constraint that no additional load is to be placed on the Pier with devices generally tethered to the sea bed rather than the pier;
- Drainage sensors - to investigate, trial and install sensors in drains, gullies and sustainable drainage systems owned by the Council and Anglian Water to learn what happens with water flows to determine the most economic way to manage excess water events and to reduce surface water flooding. An element of this will be funded by Anglian Water;
